### **Test Report**

Test Name	Results	Units	Bio. Ref. Interval
LIPID SCREEN, SERUM (Spectrophotometry)			
Cholesterol, Total	168.40	mg/dL	<200.00
Triglycerides	150.37	mg/dL	<150.00
HDL Cholesterol	32.99	mg/dL	>40.00
LDL Cholesterol, Calculated	105.34	mg/dL	<100.00
VLDL Cholesterol,Calculated	30.07	mg/dL	<30.00
Non-HDL Cholesterol	135	mg/dL	<130

## Note

- 1. Measurements in the same patient can show physiological & analytical variations. Three serial samples 1 week apart are recommended for Total Cholesterol, Triglycerides, HDL& LDL Cholesterol.
- Additional testing for Apolipoprotein B, hsCRP, Lp(a) & LP-PLA2 should be considered among patients with moderate risk for ASCVD for risk refinement.

# Treatment Goals as per Lipid Association of India 2020

RISK CATEGORY	- · · · · · · · · · · · · · · · · · · ·		CONSIDER THERAPY	
CATEGORT	LDL CHOLESTEROL (LDL-C)(mg/dL)	NON HDL CHLOESTEROL (NON HDL-C) (mg/dL)	LDL CHOLESTEROL (LDL-C)(mg/dL)	NON HDL CHLOESTEROL (NON HDL-C) (mg/dL)
Extreme Risk Group Category A	<50   (Optional goal ≤30)		≥50	≥80
Extreme Risk Group Category B			>30	>60
Very   High	<50		≥50	≥80
High	<70	<100	≥70	≥100
Moderate	<100	<130	≥100	≥130
Low	<100	<130	≥130*	≥160*

<sup>\*</sup>In low risk patient, consider therapy after an initial non-pharmacological intervention for at least 3 months

# **Test Report**

Test Name	Results	Units	Bio. Ref. Interval
GLUCOSE, FASTING (F) (Hexokinase)			
Glucose Fasting	93.35	mg/dL	70.00 - 100.00

## **VITAMIN B12; CYANOCOBALAMIN**

(Chemiluminescent Immunoassay)

213.00 Vitamin B12; Cyanocobalamin pg/mL 211.00 - 911.00

#### **Notes**

- 1. Interpretation of the result should be considered in relation to clinical circumstances.
- 2. It is recommended to consider supplementary testing with plasma Methylmalonic acid (MMA) or plasma homocysteine levels to determine biochemical cobalamin deficiency in presence of clinical suspicion of deficiency but indeterminate levels. Homocysteine levels are more sensitive but MMA is more specific
- 3. False increase in Vitamin B12 levels may be observed in patients with intrinsic factor blocking antibodies, MMA measurement should be considered in such patients
- 4. The concentration of Vitamin B12 obtained with different assay methods cannot be used interchangeably due to differences in assay methods and reagent specificity

### **VITAMIN D, 25 - HYDROXY, SERUM**

(Chemiluminescence)

30.09 Vitamin D, 25 Hydroxy nmol/L 75.00 - 250.00

# Interpretation

LEVEL	REFERENCE RANGE IN nmol/L	COMMENTS
Deficient		High risk for developing bone disease
Insufficient	50-74	Vitamin D concentration which normalizes     Parathyroid hormone concentration
Sufficient	75-250	Optimal concentration for maximal health benefit
Potential   intoxication	   >250   	High risk for toxic effects

### **Test Report**

Test Name Results Units Bio. Ref. Interval Note

- The assay measures both D2 (Ergocalciferol) and D3 (Cholecalciferol) metabolites of vitamin D.
- 25 (OH)D is influenced by sunlight, latitude, skin pigmentation, sunscreen use and hepatic function.
- Optimal calcium absorption requires vitamin D 25 (OH) levels exceeding 75 nmol/L.
- It shows seasonal variation, with values being 40-50% lower in winter than in summer.
- Levels vary with age and are increased in pregnancy.
- A new test Vitamin D, Ultrasensitive by LC-MS/MS is also available

THYROID PROFILE,TOTAL, SERUM (Chemiluminescent Immunoassay)			
T3, Total	1.01	ng/mL	0.60 - 1.81
T4, Total	7.30	μg/dL	4.50 - 11.60
TSH	3.10	μIU/mL	0.35 - 5.50

### Note

- 1. TSH levels are subject to circadian variation, reaching peak levels between 2 4.a.m. and at a minimum between 6-10 pm . The variation is of the order of 50% . hence time of the day has influence on the measured serum TSH concentrations.
- 2. Alteration in concentration of Thyroid hormone binding protein can profoundly affect Total T3 and/or Total T4 levels especially in pregnancy and in patients on steroid therapy.
- 3. Unbound fraction (Free,T4 /Free,T3) of thyroid hormone is biologically active form and correlate more closely with clinical status of the patient than total T4/T3 concentration
- 4. Values <0.03 uIU/mL need to be clinically correlated due to presence of a rare TSH variant in some individuals

# **Test Report**

Test Name	Results	Units	Bio. Ref. Interval
HbA1c (GLYCOSYLATED HEMOGLOBIN), BLOOD (HPLC, NGSP certified)			
HbA1c	5.0	%	4.00 - 5.60
Estimated average glucose (eAG)	97	mg/dL	

# Interpretation

HbA1c result is suggestive of non diabetic adults (>=18 years)/ well controlled Diabetes in a known Diabetic Interpretation as per American Diabetes Association (ADA) Guidelines

	Reference Group	Non diabetic adults >=18 years	At risk (Prediabetes)	Diagnosing   Diabetes	Therapeutic goals     for glycemic control
İ	HbA1c in %	4.0-5.6	5.7-6.4	>= 6.5	<7.0

Note: Presence of Hemoglobin variants and/or conditions that affect red cell turnover must be considered, particularly when the HbA1C result does not correlate with the patient's blood glucose levels.

	FACTORS THAT INTERFERE WITH Hba1C MEASUREMENT	FACTORS THAT AFFECT INTERPRETATION OF HBA1C RESULTS	
	Hemoglobin variants,elevated fetal hemoglobin (HbF) and chemically modified derivatives of hemoglobin (e.g. carbamylated Hb in patients with renal failure) can affect the accuracy of HbAlc measurements	Any condition that shortens erythrocyte survival or decreases mean erythrocyte age (e.g.,recovery from acute blood loss, hemolytic anemia, HbSS, HbCC, and HbSC) will falsely lower HbAlc test results regardless of the assay method used.Iron deficiency anemia is associated with higher HbAlc

Basophils	0.03	thou/mm3	0.02 - 0.10
Platelet Count	302	thou/mm3	150.00 - 410.00
Mean Platelet Volume	8.7	fL	6.5 - 12.0

#### Comment

In anaemic conditions Mentzer index is used to differentiate Iron Deficiency Anaemia from Beta- Thalassemia trait. If Mentzer Index value is >13, there is probability of Iron Deficiency Anaemia. A value <13 indicates likelihood of Beta- Thalassemia trait and Hb HPLC is advised to rule out the Thalassemia trait.

#### Note

- As per the recommendation of International council for Standardization in Hematology, the differential leucocyte counts are additionally being reported as absolute numbers of each cell in per unit volume of blood
- 2. Test conducted on EDTA whole blood

#### IMPORTANT INSTRUCTIONS

•Test results released pertain to the specimen submitted. •All test results are dependent on the quality of the sample received by the Laboratory. 
•Laboratory investigations are only a tool to facilitate in arriving at a diagnosis and should be clinically correlated by the Referring Physician. •Report delivery may be delayed due to unforeseen circumstances. Inconvenience is regretted. •Certain tests may require further testing at additional cost for derivation of exact value. Kindly submit request within 72 hours post reporting. •Test results may show interlaboratory variations. •The Courts/Forum at Delhi shall have exclusive jurisdiction in all disputes /claims concerning the test(s). • or results of test(s). •Test results are not valid for medico legal purposes. •This is computer generated medical diagnostic report that has been validated by Authorized Medical Practitioner/Doctor. •The report does not need physical signature.

(#) Sample drawn from outside source.

If Test results are alarming or unexpected, client is advised to contact the Customer Care immediately for possible remedial action.
